The graph displays the temperature of the water in the tank over time. The y-axis represents temperature in degrees Celsius (°C), ranging from 10 to 30. The x-axis represents the day, with labels for July 22, July 27, August 01, and August 06. A vertical line is drawn at July 22, and a horizontal line is drawn at 10°C. The temperature starts at approximately 11°C on July 22 and remains constant at 10°C from July 27 onwards.

Figure 1 is a line graph showing the temperature of the water column (°C) versus Day. The y-axis ranges from 10 to 30 °C. The x-axis shows dates from July 22 to August 6. A solid vertical line is at July 23. A solid horizontal line is at approximately 10.5 °C. A dashed horizontal line is at approximately 11.5 °C. A dotted horizontal line is at approximately 10.0 °C. The data points (black dots) show a sharp increase in temperature from July 22 to July 23, followed by a gradual decrease and then a slight increase towards August 6.

Figure 1 is a line graph showing the temperature of the water in the tank over time. The y-axis is labeled "°C" and ranges from 10 to 30. The x-axis is labeled "Day" and shows dates from Jul 22 to Aug 06. The temperature starts at approximately 10.5°C on Jul 22, drops to about 10.2°C on Jul 23, and then remains relatively stable, fluctuating between 10.1°C and 10.3°C through Aug 06. A vertical line is drawn at Jul 23, and a horizontal line is drawn at 10.2°C.
