

The graph shows the daily number of COVID-19 cases in the Netherlands from April 1 to April 15, 2020. The x-axis represents the day, with labels for April 3, April 8, and April 13. The y-axis represents the number of cases, with a scale from 0 to 1000. Three data series are plotted: observed cases (solid line), predicted cases (dashed line), and a reference line (dotted line). The observed cases show a peak around April 10 and then a decline. The predicted cases show a peak around April 10 and then a decline. The reference line is a horizontal line at approximately 100 cases per day.

Figure 1 is a line graph showing the diurnal temperature profile of the water column in the upper 10 m of the water column. The y-axis represents temperature in $^{\circ}\text{C}$, ranging from 6 to 18. The x-axis represents the Day, with labels for Apr 03, Apr 08, and Apr 13. A solid line represents the mean temperature, and two dashed lines represent the standard deviation. A red dot marks the onset of the stratification period on April 2nd.

Day	Control (°C)	100 mg/kg (°C)	200 mg/kg (°C)
Apr 03	7.8	7.8	7.8
Apr 04	8.5	10.5	11.5
Apr 05	9.0	11.5	12.5
Apr 06	9.5	12.0	13.5
Apr 07	10.0	12.5	14.5
Apr 08	10.5	13.0	15.5
Apr 09	11.0	13.5	16.0
Apr 10	11.5	14.0	16.0
Apr 11	11.8	14.5	16.0
Apr 12	12.0	15.0	16.0
Apr 13	12.2	15.5	16.0

The graph shows the progression of cases over time. The X-axis is labeled 'Day' and has major ticks for Apr 03, Apr 08, and Apr 13. The Y-axis represents the number of cases, with a grid of horizontal lines. There are four lines in total: one solid line and three dashed lines. The solid line starts at approximately 10 cases on Apr 01 and rises to about 45 cases by Apr 15. The three dashed lines start at approximately 5, 10, and 15 cases on Apr 01. The dashed line starting at 15 cases rises to about 55 cases by Apr 15. The dashed line starting at 10 cases rises to about 35 cases by Apr 15. The dashed line starting at 5 cases rises to about 25 cases by Apr 15.

Figure 1 is a line graph showing the temperature profile of the water column on April 3, 8, and 13. The y-axis represents temperature in degrees Celsius (°C) from 6 to 18. The x-axis represents the day. A vertical line marks the start of the water column. Three lines represent the temperature profile on different dates: April 3 (dashed line), April 8 (solid line), and April 13 (dotted line). The temperature increases over time, with the April 13 profile being the highest and the April 3 profile being the lowest.
