

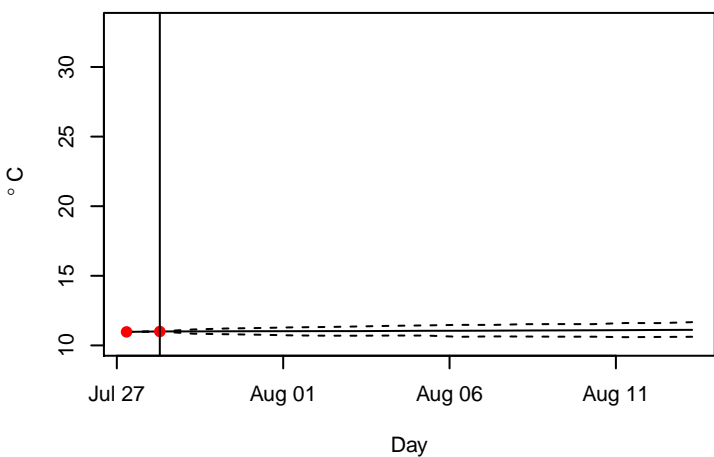

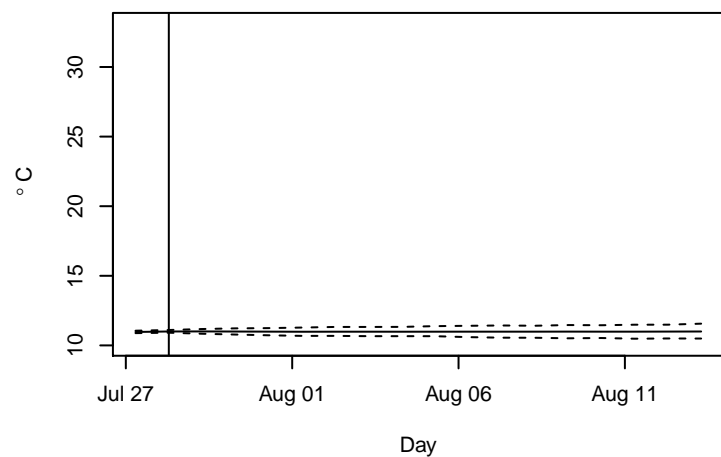

Figure 1 is a line graph showing the temperature of the water in the tank (°C) versus Day. The y-axis represents temperature in degrees Celsius, ranging from 10 to 35. The x-axis represents the day, with labels for Jul 27, Aug 01, Aug 06, and Aug 11. The temperature starts at approximately 35°C on July 27 and drops sharply to about 10°C by July 28. It then remains relatively stable, fluctuating between 10°C and 12°C through August 11.
