Figure 1 is a line graph showing the daily mean temperature (solid line) and its 95% confidence interval (dashed lines) for the period from October 10 to October 26, 2019. The y-axis represents temperature in degrees Celsius (°C), ranging from 12 to 20. The x-axis represents the day. A vertical line marks the day of the intervention on October 10. The temperature starts around 16.8°C, remains relatively stable until October 16, then decreases to approximately 15.5°C by October 21, and continues to decline slightly to about 15.3°C by October 26.

Figure 1 is a line graph showing the diurnal temperature profile of the water column in the upper 10 m of the water column. The y-axis is temperature in degrees Celsius (°C), ranging from 12 to 20. The x-axis is Day, with labels for Oct 11, Oct 16, Oct 21, and Oct 26. A vertical line is drawn at approximately Oct 10. Two lines represent the temperature profile: a solid line for the surface and a dashed line for the bottom. The surface temperature starts at ~13.2°C, peaks at ~14.1°C around Oct 21, and ends at ~13.5°C. The bottom temperature starts at ~12.8°C, peaks at ~16.2°C around Oct 18, and ends at ~14.8°C.
