

The graph displays the daily number of COVID-19 cases in the Netherlands. The solid line represents the observed data, the dashed line represents the model fit, and the red dots represent individual daily case counts. The x-axis is labeled 'Day' with dates Apr 28, May 03, May 08, and May 13. The y-axis represents the number of cases, with a vertical line at day 28 indicating the start of the model fit.

Figure 1 is a line graph showing the temperature profile of the water column in Lake Michigan from April 28 to May 15, 1997. The y-axis represents temperature in degrees Celsius (°C), ranging from 8 to 20. The x-axis represents the day. A vertical line at approximately April 29 marks the start of the study. The graph shows a solid line for the surface temperature and a dashed line for the bottom temperature. Both temperatures generally increase over time, with the surface temperature reaching about 16.5°C and the bottom temperature reaching about 13°C by May 15. Red dots indicate the locations of the temperature sensors.

The graph displays the daily number of COVID-19 cases in the Netherlands. The x-axis represents the date, with labels for April 28, May 03, May 08, and May 13. The y-axis represents the number of cases, with tick marks at 0, 100, 200, 300, 400, 500, 600, 700, 800, 900, and 1000. A solid line shows the observed data up to May 1, 2020, and the predicted data thereafter. Two dashed lines represent the 95% prediction interval. A vertical line is drawn at May 1, 2020, indicating the start of the prediction period.

Date	Observed Cases	Predicted Cases (Mean)	95% Prediction Interval (Lower)	95% Prediction Interval (Upper)
Apr 28	~250	-	-	-
Apr 29	~200	~200	~150	~250
Apr 30	~250	~250	~180	~320
May 01	~250	~250	~180	~320
May 02	~220	~250	~150	~350
May 03	~250	~280	~180	~380
May 04	~300	~320	~220	~420
May 05	~320	~350	~220	~450
May 06	~330	~350	~210	~460
May 07	~300	~320	~180	~420
May 08	~300	~310	~170	~400
May 09	~300	~310	~170	~400
May 10	~280	~290	~150	~380
May 11	~280	~280	~140	~370
May 12	~290	~290	~140	~380
May 13	~300	~310	~140	~400
May 14	~320	~340	~160	~420
May 15	~350	~370	~190	~450

Figure 1 is a line graph showing the diurnal temperature profile of the water column in the upper 10 m of the water column at the study site. The y-axis represents temperature in degrees Celsius (°C), ranging from 8 to 20. The x-axis represents the day, with labels for Apr 28, May 03, May 08, and May 13. A solid line represents the mean temperature, and a dashed line represents the standard deviation. Red dots indicate the temperature at the time of each sampling event. A vertical line is drawn at approximately May 01, indicating the date of the first sampling event.

Figure 1 is a line graph showing the diurnal temperature profile of the water column in the upper 20°C of the water column from April 28 to May 15, 2002. The y-axis represents temperature in °C (8 to 20), and the x-axis represents the day. A solid line shows the temperature profile, which is mostly isothermal at ~12°C until May 1, then warms to ~15°C by May 8. Dashed lines show the 95% confidence interval, which widens after May 1. A vertical line marks May 1.

Day	Temperature (°C)	95% CI Lower (°C)	95% CI Upper (°C)
Apr 28	12.0	11.5	12.5
May 01	12.0	11.0	13.0
May 03	13.5	11.5	15.5
May 05	14.5	12.5	17.5
May 08	15.0	12.5	17.5
May 10	15.0	12.0	18.0
May 13	15.0	11.5	19.0
May 15	15.5	12.0	19.5
