

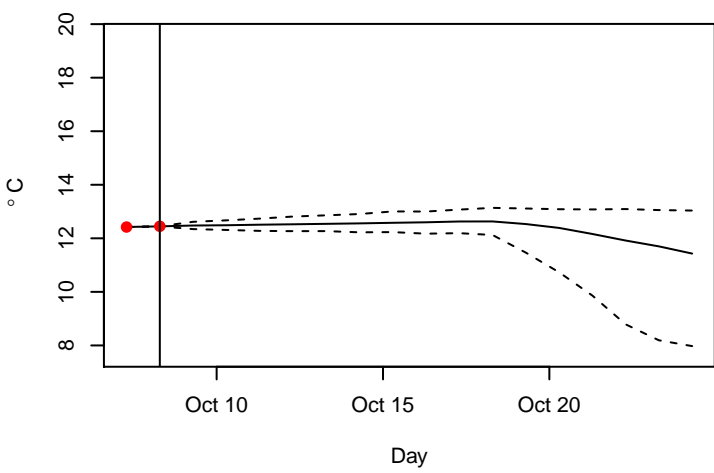

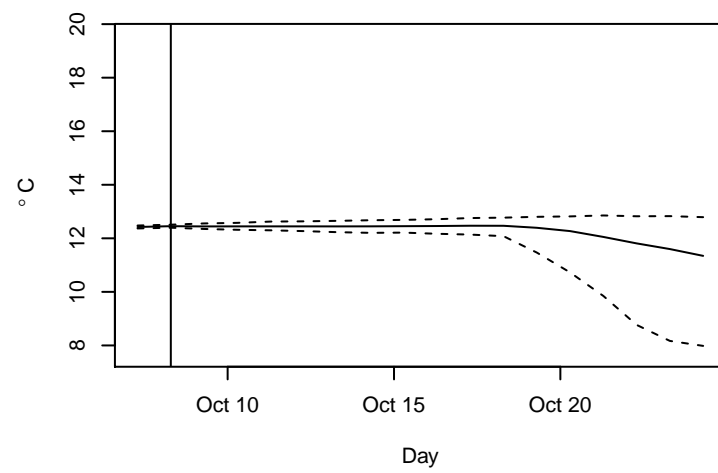

Figure 1 is a line graph showing the evolution of the effective reproduction number (R_{eff}) over time for the 2019-2020 season. The y-axis represents R_{eff} , ranging from 8 to 20. The x-axis represents the day, with labels for Oct 10, Oct 15, and Oct 20. Two lines are plotted: a solid black line and a dashed black line. Both lines start at approximately 17.5 on Oct 5. The solid line peaks at about 17.8 on Oct 8 and then gradually declines to about 12.2 by Oct 25. The dashed line peaks at about 19.5 on Oct 12 and then declines to about 8.2 by Oct 25. A vertical line is drawn at Oct 8, and two red dots mark the points on the lines at this date.
