Figure 1 is a line graph showing the daily maximum temperature (°C) from July 12 to July 27, 2019. The y-axis represents temperature in degrees Celsius, ranging from 10 to 35. The x-axis represents the day of the month, with labels for Jul 12, Jul 17, Jul 22, and Jul 27. A solid black line represents the observed maximum temperature, which remains relatively stable around 10-11 °C. A solid purple line represents the model-predicted maximum temperature, which is consistently lower than the observed temperature, staying around 8-9 °C. Dashed lines represent the 95% confidence interval for the model predictions, which is very narrow and stays around 9-10 °C.

Figure 1: A line graph showing the temperature of the water in the tank over time. The y-axis is labeled '°C' and ranges from 10 to 35. The x-axis is labeled 'Day' and shows dates from Jul 12 to Jul 27. A solid black line represents the temperature, which remains constant at approximately 10.5°C. A vertical dashed line is drawn at Jul 12. A horizontal dashed line is drawn at 10°C. A shaded gray area represents the uncertainty, ranging from approximately 9.5°C to 11.5°C.

Figure 1 is a scatter plot showing the daily mean temperature (°C) from July 12 to July 27, 2019. The y-axis represents temperature in °C, ranging from 10 to 35. The x-axis represents the day of the month, with labels for Jul 12, Jul 17, Jul 22, and Jul 27. Red dots represent the daily mean temperatures, which are mostly around 10-11 °C. A solid black line is at 10 °C, and two dashed black lines are at approximately 9.5 °C and 10.5 °C. A vertical solid black line is at Jul 12.

Figure 1 is a line graph showing the temperature of the water in the tank (°C) versus Day. The x-axis represents the day, with major ticks at Jul 12, Jul 17, Jul 22, and Jul 27. The y-axis represents the temperature in degrees Celsius, with major ticks at 10, 15, 20, 25, 30, and 35. A vertical line is drawn at Day 12.5, and a horizontal line is drawn at 10°C. The temperature starts at approximately 10.5°C on July 12 and remains relatively stable, fluctuating between 10°C and 11°C through July 27.
