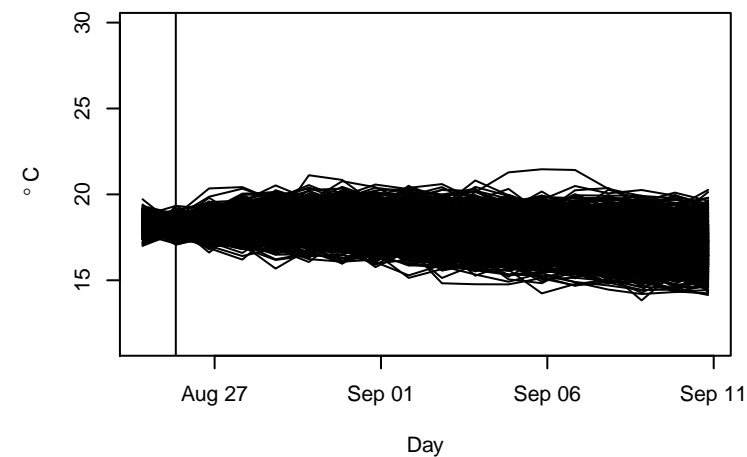

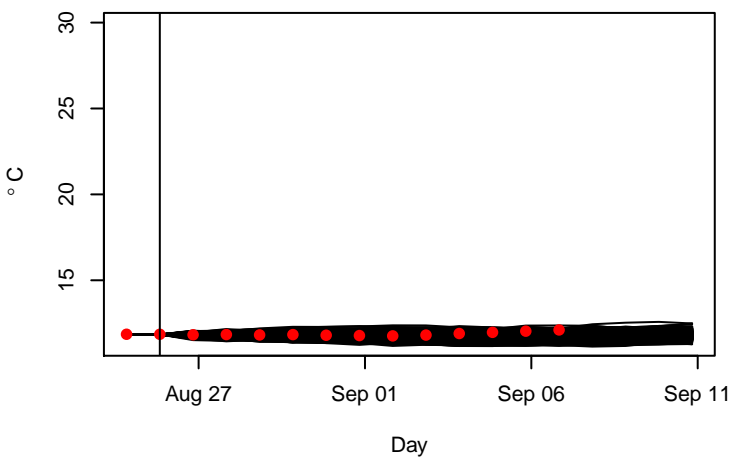

Figure 1 is a line graph showing the temperature of the water column (°C) versus Day (Aug 27 to Sep 11). The temperature starts around 12°C and increases to about 16°C. A vertical line is drawn at approximately August 29, and a horizontal line is drawn at approximately 12.5°C.

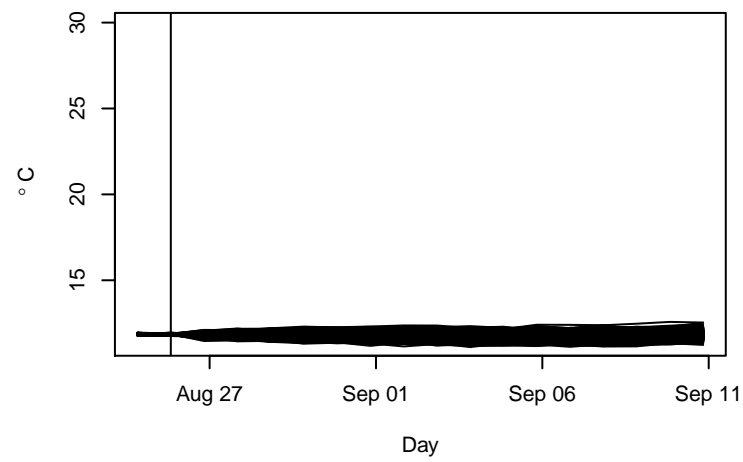

Figure 1 is a plot of temperature (°C) versus Day. The y-axis ranges from 15 to 30 °C. The x-axis shows dates from August 27 to September 11. A vertical line is at August 27. Red dots represent data points, and a black shaded area represents the model uncertainty. The temperature is relatively stable around 12-13 °C.

Figure 1 is a line graph showing the temperature of the water column (°C) versus Day (Aug 27 to Sep 11). The temperature is relatively stable, ranging from approximately 12°C to 14°C. A vertical line is drawn at approximately August 29, indicating the day of the first rain event.
